USE OF TRAINED INTELLIGENCE ANALYSTS

50X1-HUM

The German ammunition dump at Ostrov (in the woods east of the Ostrov-Lange road) has been partially dismantled. In the part remaining, however, there are 2,400 German work:rs under the direction of a Soviet engineer, Colonel Kornysagin, working on German ammunition.

2. There is an ammunition dump at Lamitsch-Wilmersdorf, from which, during April 1946, a total of 450 tons of artillery ammunition, cleaned and packed in boxes, was dispatched eastwards via Frankfurt-Brest Litovsk. Fresh deliveries of ammunition to Lamitsch totalled 200 tons in April.
3. Ammunition has also been dispatched to Brest Litovsk via Fürstenwalde from Töpelin and Güstrow. These are the first cases of ammunition known to have been returned to the USSR.
4. The Zeithain Artillery and Ammunition Dump is situated in the buildings of the former ammunition factory, and consists of approximately 250 underground magazines built of reinforced concrete and some brick buildings above ground. The latter are well concealed by the woods in which the dump is situated.
5. The commandant of the dump is a Lt. Colonel Lonyetkin; his deputy is a Captain Isakrov.
6. This dump contains ammunition for guns of all calibers, including small arms ammunition. Optical instruments, grenades, essential spares for various weapons, etc. are also held.
7. Guard duties for the Zeithain dump are performed by units of the First Guards Mechanised Army. The duty period is fifteen days and the guards are billeted in Zeithain. The dump is surrounded with barbed wire and is guarded by twenty-four sentries who are relieved every two hours. The guard consists of seventy-eight men and four NCOs, commanded by an officer. All sentry points are connected by electrical signals. The six main sentry points are also connected with the guard room by telephone. The men are armed with carbines and receive fifteen rounds when going on duty. The NCO's are armed with machine carbines, each with one magazine.
